To: BPIP Info <bpipinfo@gmail.com>

This information has been shared by Paula at UCB in case it is helpful.

she says:

For information: my colleague, who is a chemistry searcher, informed me that last week there was an issue on STN affecting structure searching with hydrogen. She noticed inconsistent results in Derwent – Markush Dwpim and searches in structure databases like Reaxys, when searching with hydrogen at different positions.

As we didn't appear to get any messages from STN about this but they informed us it was a known issue, we thought you might like to check searches carried out last week, if you were doing something similar. We are not sure of the exact issues as they didn't disclose what these are.

Regards

Kathy
